Education

B.Tech CSE (ML & AI)
Graphic Era Hill University
2020-2024
Degree

Seven Oaks School
Higher Secondary (CISCE)
2019-2020
Marksheet

Technical Skills

Languages & Tools
Python | SQL | Tableau | Excel |
Power-BI | Github | Java | Angular

Platform
Jupyter Notebook | Google Colab |
PostgreSQL | VS Code

ML Framework
Pandas | Numpy | Scikit-Learn |
Matplotlib | seaborn | NLTK

Certifications

Azure AI Fundamentals
Microsoft

Advanced Certification in Full Stack Data Science & AI
IIT Guwahati

Cloud Solution Architect (aws)
AWS

Cybersecurity Essentials
CISCO

Extra-Curricular

Diploma in Tabla Playing
Bhangya Sangeet Parishad

Summary

Software Engineer transitioning into Data Science with experience in Python, SQL, and machine learning through applied projects in clustering, fraud detection, and analytics. Skilled in data preprocessing, feature engineering, model evaluation, and building workflows that convert raw data into measurable insights.

Professional Experience

LTI Mindtree **Feb 2025 - Present**
Software Engineer **Pune - Maharashtra**

- Implemented **10+** front-end features and UI enhancements using Angular, ensuring responsiveness and maintainability.
- Developed and maintained RESTful APIs and core backend functionality using **Spring Boot microservices architecture**.
- Led a **5-member trainee team** during onboarding, coordinating task allocation and resolving blockers to complete deliverables on time.

Data Science Projects

Netflix Movies and TV Shows Clustering **Oct 2025**
Clustering Project

- Clustered **8,000+** Netflix titles to improve content grouping and recommendation relevance.
- Performed **EDA**, text cleaning, and **vectorization** to convert raw descriptions into model-ready features.
- Applied **PCA** to reduce features by **70%** while retaining 80%+ variance for efficient training.
- Evaluated clustering quality using **elbow** and **silhouette** scores and finalized 5–7 meaningful clusters.

Credit Card Fraud Detection using Machine Learning **Sep 2025**
ML Project

- Built a fraud detection workflow using **284K+** transactions to identify high-risk patterns.
- Cleaned data, handled imbalance using **SMOTE**, and applied scaling to prepare consistent model inputs.
- Trained and compared 5 classification models using **precision, recall, F1-score, ROC-AUC**, and confusion matrix.
- Selected the best model achieving 99% **ROC-AUC** and 92% fraud recall on test data.

HealthCare Analysis - Power BI **Aug 2025**
Power BI Project

- Defined the problem of analyzing **7000+ healthcare records** to improve visibility into admissions, outcomes, and resource utilization.
- Preprocessed and modeled data by integrating **multiple clinical datasets** creating **12+ DAX measures** for accurate metric calculations.
- Evaluated performance trends through **interactive Power BI dashboards**, uncovering key bottlenecks in patient flow and efficiency.
- Enabled data-driven decisions by automating reporting and reducing manual analysis time by **25%** overall efficiency.
